

Data protection check-up.

How effective are the existing data protection measures in your organization?

Are the relevant legal regulations observed?

Our data protection check-up will provide you with a quick overview including a catalog of measures.

Systematically protect personal data.

Take the first step: A data protection check-up is the most efficient way to determine whether data protection in your organization complies with the European General Data Protection Regulation (EU-GDPR).

CONCENTRATE ON YOUR CORE BUSINESS – WE WILL DEAL WITH YOUR DATA PROTECTION!

Our experts are always up to date and will provide you with detailed information on all questions relating to personal data. We will analyze your processes, detect vulnerabilities and help you to optimize your processes.

The provisions of the German Federal Data Protection Act and its compliance are described. Further action is taken based on this initial situation analysis. The check-up is based on the guide to auditing and assessment of statutory data protection according to the EU-GDPR.

OUR APPROACH

1) Analysis of the actual state of your data protection level

During the data protection check-up, our experts will verify the effectiveness of the existing data protection measures in your organization.

2) Prioritized catalog of measures

The results will be summarized in a report after the check-up. Deviations from the requirements in the German Federal Data Protection Act* will be described and prioritized. If possible, suitable measures for complying with the requirements will be recommended.

YOUR ADVANTAGES

- Tried and tested procedure
- Identification of the specific data protection requirements and the current fulfillment level
- Review of the order processing contract
- Documentation of current deviations of the GDPR
- Identification of optimization potential for complying with legal data protection requirements

Depending on the assurance level for data protection, it may be valuable for TÜV Rheinland to provide an external data protection officer.
