

Our expertise for your further training.

While other children were tirelessly chasing a ball, Paul preferred to work with electrics and electronics. Plugging in circuits, trying them out, and seeing what happens – that never got boring for Paul. Even then, he was a born technician.

THE DREAM

He went straight to university after school to turn his passion into a profession. He attended the lecture hall with zeal, and absorbed the basics and special knowledge greedily. However, he always lacked the opportunity to put his expertise to practical use. This was to change when he attended an advanced training course at TÜV Rheinland Academy alongside his studies.

A course on the subject of risk assessment in electrical engineering opened his eyes. It was not so much the content that inspired Paul, rather the type of training: His instructor presented highly topical, practical applications in a competent, passionate, and lively manner. From then on, it was clear to Paul that he also wanted to share his specialist knowledge with interested course participants.

THE SOLUTION

After several years on the job, Paul applied to TÜV Rheinland Academy as a technical trainer. His extensive project experience was the decisive factor in his acceptance. Since then, he has worked in many places – in Germany as well as at other locations worldwide.

In emerging markets, he helps young university graduates with practical training into professional life. He prepares specialists and managers for their area of responsibility and shows them how to behave in a legally compliant manner. He helps companies undergoing restructuring to promote young talent. In addition, he contributes his didactic experience to the development of future-oriented teaching methods. These include virtual applications and augmented reality.

YOUR BENEFITS

In the midst of the fourth industrial revolution, standing still is not an option. Due to the increasing mechanization and digitalization of the working world, existing skills are not sufficient and new ones are required. Anyone who fears a shortage of skilled workers, lengthy recruitment processes, and downtime costs due to vacancies in this context has not yet considered the most obvious solution: The further training of one's own resources – from "basic" to "advanced" to "expert". TÜV Rheinland Academy is committed to expanding technical and professional skills at all levels of the economy.

SUMMARY

For Paul, a dream has come true because his job allows him to do exactly what inspires him most. However, the best thing is that he can share his passion with others and help them.

You will benefit from this soon, too!

ABOUT TÜV RHEINLAND ACADEMY

In times of emerging markets and increasing demand for skilled workers, technical expertise requires a reliable companion. With branches all over the world, TÜV Rheinland Academy is the international institution for technical and professional expertise in all important subject areas. We impart and verify specialist knowledge in precisely the right way. Our innovative training solutions range from individual training courses to customized personnel development concepts. In this way, we comprehensively strengthen the technical skills of participants all over the world.
