# We train skilled workers for your company who will help make your business successful in the market.

You are looking for skilled workers for your modern manufacturing facilities? We provide vocational training in Kaluga for companies operating in the region or planning a company set up there. Our modern training center, including experienced instructors and lecturers, will be at your disposal. Pre-

cisely tailored to your needs, our employees will take care of preparation and implementation of qualification measures in technical-industrial occupations for new entrants to the labour market as well as for people looking for a career change. We convey basic theoretical knowledge in their fields of

work and practice-oriented qualification on modern installations. Professional and comprehensive training and supervision of the apprentices are a matter of course for us. The close cooperation with companies as a system of work-related training will generate a high added value for all participants.

## TÜV Rheinland Training Center Kaluga

We convey technical knowledge – practice-oriented and up-to-date. All careers and disciplines correspond to the economic demand for skilled manpower in the region and the challenging tasks in the working environment of the companies. We offer high quality “made in Germany” training – adjusted to the needs of the Russian market – and prepare people for the training qualification. Subsequently there will be the possibility to advanced qualification through on-the-job training in accordance with the company’s needs.

## Quick and cost-efficient training with RUDUS.

Basic professional and advanced qualification in close cooperation with theoretical and practical content. The concept to success from Germany for the Russian market – for the training and the development of specialists.

The vocational trainings in Germany are based on a dual system preparing the apprentices for the theoretical and practical work in a plant by combining apprenticeship and vocational training. Vocational schools and companies are cooperating closely.

RUDUS (Russian Dual System) has been especially tailored to the requirements of the Russian market. In our training center in Kaluga we provide the theoretical knowledge and the practical skills needed in your company which will be taught in compact

learning units. The basic qualification obtained together with the awarded vocational qualification can later be upgraded in studies alongside the job.

Traditional education:

Professional education with RUDUS:

### Your advantages at a glance

With the decision to undergo a training according to RUDUS with TÜV Rheinland:

- you will have the opportunity to train your own specialists for your company in a targeted way
- you minimize both costs and risks for the vocational training
- you can take advantage of our know-how in vocational education
- and in the work with young adults and adolescents
- you will benefit from experienced teachers, trainers and lecturers as well as from the modern technical equipment of the interdisciplinary training center.

## TÜV Rheinland Academy.

As an international training service provider, we focus on sustainable human resources and corporate development as key factors in competitiveness. We offer a practice-oriented qualification without unnecessary content. More than 120.000 participants per year appreciate us as competent partner in industry, trade, commerce and service.

We combine more than 40 years of experience in know-how and international business competence at our locations in Germany and abroad. With our innovative services we support our customers to create value on a worldwide scale. While you concentrate on your core business, we take care of the human resources development.

In cooperation with

**Kalibrix**

Kalibrix GmbH has been committed for more than 15 years to high-quality calibration services for the industrial economy. We operate modern laboratories and metrology centers at our locations throughout Germany to meet the constantly increasing customer demands in the automotive and electrical industry, in mechanical engineering and the aeronautical industry. Precision, reliability and speed are the guiding themes we are consequently pursuing and continuously developing every day. As experts for metrological trainings we transfer these requirements to professionals-in-training and graduates in order to prepare them best possible for the challenging calibration tasks and processes.
