Emission declarations and PRTR reports

Emission reduction of airborne pollutants and greenhouse gases has been an important political goal in Germany and Europe for decades. The implementation of this goal has considerably improved air quality in our conurbations. Every four years, operators of large plants publish emission declarations regarding long term monitoring of emission development. Very large plants, for example power plants, provide their current mass emission flows and energy use PRTR reports (PRTR: Pollutant Release and Transfer Register) to the authorities to be further processed. As a §26 BImSchG approved test institute for e.g. dispersion calculations in certification processes, we have excellent experience and knowledge about a vast range of plants. We have extensive expertise in preparing your emission data in a suitable form for emission declarations and PRTR reports.

You and your company can help to create a future in which technology and nature are in harmony!

Our services

- Analysis of your plant and operating processes regarding emission declarations according to §27 BImSchG and 11th BImSchV
- Preparation of all data for official registration
- Support in the preparation (layout of master data) and communication with the competent bodies
- Creation of your emission declaration
- Further training of your emission officials in drafting emission declarations themselves

Always a good sign.

This mark stands for all the information about products, services and systems that are tested, certified or inspected by TÜV Rheinland.

Transparent, available anytime world-wide – powerful and unique.
The TÜV Rheinland test mark.
