ISO 27001:2013 Certification

Information is one of the most important assets of an organization. Ensuring its confidentiality, integrity and availability guarantees the success of the business.

Nowadays, a company’s business data and its employees’ personal information are exposed to various threats, directed or unintentional, so an Information Security Management System (ISMS) is of utmost importance and very useful for the daily management of the organization.

ISO 27001:2013 specifies the requirements for an ISMS applicable to any organization that needs to demonstrate its ability to handle internal and/or customer information with confidentiality and integrity. In addition, the high-level structure of the ISO standard makes it easy to integrate quality, security and environmental management standards.

The first step in an ISO 27001 Information Security Management System implementation project is risk analysis and risk management.

THE AUDIT PROCESS FOR OBTAINING THE CERTIFICATE CONSISTS OF TWO PHASES:

Initial Audit Phase 1
It is verified if the design of the management system is adequate for the operations and if it contemplates all the requirements of the standard to be certified. Then, a report is issued indicating the strengths of the system and its potential for improvement.

Phase 2
The implementation of the improvements agreed in the initial audit and the compliance of its operating procedures are verified. The Management System is formally reviewed to assess its conformity with the requirements of the standard. If the result of the Phase 2 audit is positive, the auditors recommend to the Certification Center the issuance of the certificate.

Certificates are issued with a validity of three years. Periodic follow-up audits are necessary for their maintenance and are usually carried out annually. Every three years a certificate renewal audit must be carried out, extending the validity of the certificate for a further three years.

BENEFITS OF ISO 27001 CERTIFICATION

- Optimize costs through transparent structures
- Integrate security as part of business processes
- Manage risks systematically
- Document structures and processes
- Demonstrate trustworthiness in the eyes of the public
- React effectively to potential problems

We offer solutions tailored to the needs of each of our clients. For this, we analyze your requirements in order to formulate together the steps to follow to achieve certification.
