

## Certification of Enterprise Management Systems.

To ensure the success of your wind farm project, we provide a range of services to support you at every phase of the project life cycle – from site selection, design and manufacturing, right through to operation.

### Product Certification

Health & Safety

Due Diligence

Training / Education

Project Planning Services

### Project Certification

Marine Warranty Survey

Laboratory Services

Management System Certification

Coating Inspection Services

### Manufacturing Surveillance

Periodic Inspections

Expert Reports

Grid Connection

CE Marking

## Certification of management systems for enterprises active in the wind energy industry

The certification of management systems plays an important role in today's economy. This is especially relevant for companies active in the wind energy industry, who are keen to ensure the sustainability, efficiency, safety and quality of their products and services by certifying their management systems. Furthermore, many enterprises now expect certification of their partners and suppliers, because this demonstrates the efforts made by the company to reach a recognized level of excellence.

We offer extensive certification services for management systems in accordance with the relevant standards and regulations. These include

- Quality Management ISO 9001
- Energy Management ISO 50001
- Environmental Management ISO 14001
- Health and Safety Management OHSAS 18001

By certifying their systems according to applicable standards, companies profit from the continuous optimization of their internal processes that results in more efficiency, innovation and competitiveness. These factors are particularly important in the fast-developing renewable energy market.

### Our experience - your benefit

The TÜV Rheinland process auditing and certification services are well structured, efficient and comprehensive. With 3,500 highly qualified specialists in technical and management services we support clients worldwide with our global network.

## Our management certification services generally proceed as follows:

### **Preliminary audit:**

If appropriate in your company's case, our experts conduct a preliminary audit to establish which management standards you have already implemented and to what extent.

### **Certification audit:**

Our auditing team determines whether your documentation concurs with the requirements of the standards. Your company must demonstrate that the management system functions in practice and our auditors will test its effectiveness.

### **Issue of certificate:**

Having met all the criteria, your company is awarded a certificate, providing evidence of the integrity of your management system and your compliance with the relevant standard.

### **Surveillance audits:**

To ensure your company is continuously optimizing processes, we carry out a further audit each year.

### **Certification renewal:**

After three years, a revision audit is carried out. This further helps to implement continuous improvement processes and demonstrates long-term commitment to your partners and customers.

Our approach is customer-oriented and we offer comprehensive certification concepts that also help companies profit from economies and synergies. TÜV Rheinland certificates positively enhance a company's reputation and their standing in their industry.

Founded 140 years ago, TÜV Rheinland is a global leader in independent inspection services, ensuring quality and safety for people, the environment, and technology in nearly all aspects of life.

### TUVdotCOM. The noticeable difference.

The Internet platform TUVdotCOM makes the difference visible: with all the products, services, companies, systems and personnel that are tested by TÜV Rheinland; optimally documented and accessible from all over the world.
