

Virtual tour
09.08.2016 | Arnhem

**January 2016 TÜV
Rheinland Nederland
moved to Arnhem. At
IPKW building SB
renovated into a
modern laboratorium.
A virtual tour in this
office is now**

available.

Building SB is built in 1941 and put into use during World War II. As part of the frontline the building was severely damaged. After 1945 the building was restored to its function as a cellulose factory.

Over the years the building has been modified several times. For TÜV Rheinland building SB is sustainably developed with respect to the original design and structure. Laboratories on the ground floor, offices on the mezzanine level and large halls on the first floor. In 2015 it was transformed for the current use as office and laboratory.

A variety of products are being tested in Arnhem. Glass is tested on the ground floor for worldwide customers. The customer base for wheelchair testing is international. De ramp, test track and climate chamber are situated on the first floor.

At the official opening in March by the mayor of Arnhem, Herman Kaiser, and during the customer day in March guided tours were given. Frequently TÜV Rheinland Nederland was asked to organise these tours to show the labs. Also many international customers want to see where their products are tested.

Now a virtual tour is available. Photographer Walter Verwaal photographed with Google Business View the inside and outside of the building. With the 360°-pictures at different places in the offices and labs it is possible to virtually walk through the building

The pictures were taken on a summer Saturday. The tour starts at the main entrance. Directly walking into the labs is possible. Use these links.

Coffee for mr Precisely

TÜV Rheinland is a global leader in independent inspection services, founded nearly 150 years ago. The group maintains a worldwide presence of more than 20,000 people; annual turnover is EUR 2 billion. The independent experts stand for quality and safety for people, technology and the environment in nearly all aspects of life. TÜV Rheinland inspects technical equipment, products and services, oversees projects, and helps to shape processes and information security for companies. Its experts train people in a wide range of careers and industries. To this end, TÜV Rheinland employs a global network of approved labs, testing and education centers. Since 2006, TÜV Rheinland has been a member of the United Nations Global Compact to promote sustainability and combat corruption.
