Our technical professionals at TÜV Rheinland will make sure that your assets are performing its required function effectively and efficiently. Our mission is to assure a safe, regulatory compliant and reliable operation of your assets.
The integrity of industrial assets is a key factor of any manufacturing business. From the planning of a plant to a well-established system, the safety and reliability are major challenges for owners and operators.

As history shows, Asset Integrity Management is a highly important part of any operation in the world. For example, the accumulated property damage from the 100 largest losses between 1974 and 2015 in the Hydrocarbon Industry alone is more than US$ 33 billion (Source: Marsh Research). This shows that it is a must to ensure that people, systems and resources that deliver integrity are in place.

Today’s Challenges

The integrity of industrial assets is a key factor of any manufacturing business. From the planning of a plant to a well-established system, the safety and reliability are major challenges for owners and operators.

As history shows, Asset Integrity Management is a highly important part of any operation in the world. For example, the accumulated property damage from the 100 largest losses between 1974 and 2015 in the Hydrocarbon Industry alone is more than US$ 33 billion (Source: Marsh Research). This shows that it is a must to ensure that people, systems and resources that deliver integrity are in place.

We understand that every industrial project has unique requirements. Therefore we offer customer specific services combining inspection and testing services with integrity, risk and process safety assessments. Following our holistic service approach, we conduct system and software consulting as well to ensure the highest asset integrity possible.
Benefits

Minimize your business risks: Our professionals bring the experience from a variety of projects into your facilities. Together with your specific knowledge for the project, we will apply our holistic service approach to make your assets ready for the future.

Assuring asset performance: Conducting our analysis, TÜV Rheinland will not only assure the safety of your assets but check for any existing potential to increase the performance. The goal is to make your business more effective and efficient while achieving a higher safety standard.

One-stop service provider: Using our global network, we will be able to fulfill your requirements to the highest standard possible. Thereby your company will only have to communicate with one business partner and we will have the best possible overview of your Asset Integrity Management. This will facilitate the improvement process, ensure high quality services and save costs.

Our Holistic Approach
